

Customer shopping  
behavior is  
**measurable,**  
segmentable, and  
actionable

An end-to-end view of 3,900 transactions turns raw purchase data into decisions on loyalty, categories, promotions, and fulfillment.

---

3,900

transactions in view

\$59.76

average purchase amount

3.75

average review rating

# One dataset connects the customer, the basket, and the experience

---

## THE DATASET

3,900

Records spanning demographics, products, spend, ratings, subscriptions, shipping, discounts, payments, and purchase frequency.

## CORE KPIS

\$59.76

Average purchase amount

3.75

Average review rating

## DECISION LENS

Who buys

What they buy

How they buy

What brings them back

# Data preparation removed noise before insight generation

---

The analysis starts with a cleaner, more consistent decision surface.

01

## Impute

37 missing review ratings were filled with category-level medians.

02

## Standardize

18 raw fields became analysis-ready names and formats.

03

## Engineer

Age groups and numeric purchase-frequency features were created.

04

## Deduplicate

The duplicate promo-code field was removed after matching discount status 100%.

# Clothing and accessories carry the commercial engine

The category mix concentrates momentum in the high-volume core.

## MERCHANDISING IMPLICATION

**Protect the high-volume core.**

Use lower-volume categories for targeted bundles and seasonal tests.

Revenue by product category · dashboard snapshot

# Subscription is the clearest growth lever

---

CURRENT PENETRATION

# 25–27%

Subscribers represent roughly one quarter of customers.

25% in the dashboard snapshot · 27% in the project report

CONVERT

## Repeat buyers

Offer benefits tied to frequency, convenience, and exclusive value.

MEASURE

## The full loop

Track conversion, repeat purchase rate, average spend, and retention by segment.

Source reconciliation: dashboard snapshot and project report differ on subscription penetration.

# Adult and middle-aged shoppers anchor demand

Age should shape the message, not flatten the market.

---

## PROJECT VIEW

### Consistent volume drivers

Adult and middle-aged customers are identified as consistent volume drivers.

## DASHBOARD VIEW

### Young leads the snapshot

Young customers lead purchase amount and customer count, followed by middle-aged and senior groups.

## ACTION

### Separate the message

Use distinct acquisition creative and loyalty messaging instead of treating age as one undifferentiated market.

The two views answer different questions: consistent demand drivers versus the dashboard snapshot's ranking.

# SQL turns business questions into repeatable decisions

---

## Customer value

Compare gender revenue, discount users above average spend, and subscriber economics.

## Product value

Rank top-rated items, discount intensity, and top products within each category.

## Behavior

Segment new, returning, and loyal customers; test whether repeat buyers are more likely to subscribe.

# The operating model is built for refresh and reuse

# Three moves can turn insight into growth

01

## Prioritize loyalty

Target repeat buyers with subscription offers and measure conversion by segment.

02

## Defend the core

Use clothing and accessories as the base for cross-sell, bundles, and seasonal merchandising.

03

## Instrument the loop

Refresh the dashboard and SQL outputs so promotions, fulfillment, and customer value can be monitored continuously.

Measure the behavior. Segment the opportunity. Reuse the system.
